Lithium Battery Gauges

For use with 12V-48V Lithium batteries

The most advanced and reliable battery gauge on the market!

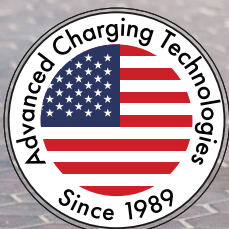

- Accurately displays battery state/charge status
- PROView Link™ compatible!
- Easy installation
- Durable and water resistant
- Easy to read color coded LEDs
- Uses intuitive technology to adapt to a wide range of applications
- All units include a Current Transducer (CT)

**We also offer gauges for Lead Acid (Wet Cell) and AGM applications.*

PROView™ LINK

PROView™ Link is a mobile app that allows you to monitor and manage the condition of your batteries.

Lithium Battery Gauges

For use with 12V-48V batteries

Each Lithium Battery Gauge includes a Current Transducer (CT).

What does this mean for you? Accurate real-time state of charge reading. Typical gauges cannot precisely detect lithium battery levels as they charge/discharge. The CT allows the gauge to accurately track amp hours in and amp hours out.

PROView Link™ is a mobile app that allows you to monitor and manage the condition of your batteries.

From your smart device you can:

- View real time data as charging is in process
- Review charging data history (up to 200 Cycles)
- Know if your equipment is fully charged or where it is in the process
- See exactly when a charger was plugged in, unplugged or lost power
- Receive free over-the-air updates
