Understanding LED Lights

LED	Explanation	Orange Solid Reverse Polarity	If a Reverse Polarity condition exists, the ORANGE ERROR LED will illuminate. This ERROR condition will be displayed whether the charger is plugged in or disconnected from an AC power source. Reverse the battery connections to fix this ERROR.
Red Solid Charging	When the battery is charging, the CHARGE LED will be illuminated RED. The CHARGE LED will remain a solid RED color (not blinking) until the battery is fully charged.	All Flashing Error Condition	If an ERROR condition exists, the Charge LED(s) will flash, and/or the ERROR LED will illuminate and/or flash. There are several reasons an ERROR condition could exist. For help troubleshooting ERROR conditions, see the section entitled TROUBLESHOOTING.
Green Solid Fully Charged	When the battery is fully charged, the CHARGE LED will be illuminated GREEN. The CHARGE LED will remain a solid GREEN color (not blinking) until either the battery charger is disconnected or the battery becomes discharged.	Red/Green Alternating Standby	When no battery is connected, the LED lights will alternate between RED and GREEN.
